Daant Mein Wo Kaala Chuna Dikh Raha Hai?

Kanpur Wale Ab **Invisible Tooth-Coloured Filling** Se Purani Black Filling Chhupa Rahe Hain — Single Visit Mein

Team meeting mein joke par haste hue aapne mehsoos kiya — logon ki nazar aapke daant ke dark metallic patch par ruk jaati hai. Wo purana silver amalgam filling saalon se wahan hai, har smile ke saath khud ko announce karta hua. Lekin ab Kanpur ke hazaron patients apni black amalgam ko **invisible, natural-looking composite** se replace kara rahe hain — aur results sirf smile nahi, confidence bhi badal rahe hain.

150+

saal se silver amalgam dentistry ka standard — lekin science aage badh gayi

~50%

mercury purani silver filling ke mixture mein (silver, tin, copper, zinc ke saath)

2–3×

zyada thermal expansion amalgam ka vs natural enamel — micro-cracks ka reason

CHAPTER 1

5 Warning Signs — Purani Filling Ab Replace Honi Chahiye

Har amalgam filling ko turant replace nahi karna — lekin in 5 signs mein se koi bhi dikhe, to silver filling replacement ka time aa gaya hai.

- 1

Persistent Pain ya Sensitivity
Bite karte waqt sharp pain, ya garam-thanda khane peene par sensitivity — filling leak ho rahi hai ya amalgam ke neeche daant mein crack ban raha hai.
- 2

Filling Ke Aas-Paas Kaala Kinaara
Black line = marginal leakage ka classic sign. Bacteria filling aur daant ke beech ghus chuke hain — neeche recurrent decay shuru ho chuki hai.
- 3

Loose ya Hilta Hua Filling
Jeebh se halka sa movement mehsoos ho to retention fail ho chuka hai — bacteria ab actively daant ke andar enter kar rahe hain.
- 4

Khana Phasna (Food Trapping)
Filling ke aas-paas gap mein khana phasta hai — decay tezi se badhti hai aur gum inflammation ho sakti hai.
- 5

Cold Shock ya Der Tak Sensitivity
Thanda drink peene par sharp pain jo kuch seconds se zyada rehta hai — nerve (pulp) already compromise ho sakti hai.

CHAPTER 2

Silver Amalgam vs Tooth-Coloured Composite

150 saal purana standard vs modern bonding science — farak sirf dikhne ka nahi, daant ki structural health ka bhi hai.

Feature	Silver Amalgam	Tooth-Coloured Composite
Appearance	Dark, metallic — har smile mein dikh jaata hai	Natural tooth colour se perfectly match
Bonding to tooth	Koi chemical bond nahi — bas cavity mein packed	Strong chemical bond enamel + dentin se
Average lifespan	10–15 saal	7–15 saal (modern materials)
Mercury content	~50% mercury	Zero — nahi hoti
Tooth reinforcement	Nahi — andar se crack ho sakta hai	Remaining structure ko reinforce karta hai
Setting time	24 ghante mein fully hard	Special light se instant cure
Number of visits	2 visits lag sakti hain	Single visit

Amalgam garam cheez khane par **expand** hota hai, thande par **contract** — natural enamel se 2–3 guna zyada rate par. Saalon ki daily fluctuations se daant ke andar micro-cracks bante hain, jo ek din poore fracture mein badal sakte hain. Composite bond karke daant ko **reinforce** karta hai — amalgam sirf gap bharta hai.

CHAPTER 3

Single Visit Ka 6-Step Invisible Filling Protocol

Modern composite = resin + finely ground glass particles. MDS-qualified specialists ka systematic shade-matching process — filling bilkul invisible.

- Step 1

1. Shade Selection
Shade guide se aapke natural daant ka exact colour match — alag-alag lighting conditions mein verify kiya jaata hai
- Step 2

2. Old Filling Removal
Purana amalgam high-speed rotary instruments + rubber dam isolation se carefully remove — mercury exposure zero
- Step 3

3. Tooth Prep & Etching
Cavity clean hoti hai, mild acid gel surface ko micro-porous banata hai optimal bonding ke liye
- Step 4

4. Bonding Agent Application
Adhesive ki patli layer + special light cure = daant se strong chemical bond
- Step 5

5. Composite Layering & Sculpting
Thin layers mein composite, har layer high-intensity light se cured — natural tooth anatomy match
- Step 6

6. Final Polishing
Contour + polish itna natural lustre — aap khud apni original enamel se alag nahi kar paoge

CHAPTER 3 · B

Kanpur Dental Filling Cost — Transparent Breakdown

Cost depend karti hai: restore hone wale surfaces ki sankhya, cavity ka size, composite material ka type, aur dentist ki expertise.

Filling Type	Cost Range	Best For
Composite (Anterior)	₹1,000 – ₹2,500	Front teeth, visible areas
Composite (Posterior)	₹1,500 – ₹3,500	Molars, premolars
GIC (Glass Ionomer)	₹800 – ₹1,500	Children, temporary restorations
Amalgam (Silver)	₹500 – ₹1,200	Budget option (recommended nahi)
Porcelain Inlay/Onlay	₹8,000 – ₹15,000	Large cavities, premium option

The Crown par complete transparency: treatment shuru hone se pehle clear, itemised estimate — no hidden charges. Quality dental care sabke liye accessible banane ke liye **EMI options** bhi available hain.

CHAPTER 4

Deri Ki Keemat — Chhoti Filling Se Bade Implant Tak

Failing amalgam replacement postpone karte rahna = decay andar deep hoti jaati hai. Bacteria pulp tak pahunche to filling ka kaam khatam.

Stage	Kya Hota Hai	Treatment	Cost
Stage 1	Chhota cavity — aaj hi easily treat ho sakti hai	Composite filling	₹1,500–₹3,500
Stage 2	Deep decay pulp ke paas pahunch gayi	Indirect pulp capping ya badi restoration	Cost badh gayi
Stage 3	Pulp infection — bacteria nerve chamber tak	Root canal treatment + crown	₹4,000–₹8,000 + ₹3,000–₹15,000
Stage 4	Tooth loss — daant bachana possible nahi	Dental implant chahiye	₹25,000–₹60,000

Financial hisaab: aaj ki ₹1,500–₹3,500 ki filling, kal ki ₹40,000+ ki implant procedure se bacha sakti hai. Early intervention sirf health ke liye nahi — wallet ke liye bhi dramatically better hai.
